[X] Bug report

## Current behavior

when i create new project with CLI

```
ng new myApp
```

and install js library with command :

```
npm install jquery -p
```

npm install it successfully(exist in /node\_modules)

I add this section to angular.json in project folder

```
"scripts": [ "../node_modules/jquery/dist/jquery.js" ],
```

and then I start the project with command `ng serve i`

i have this error:

```
## 91% additional asset processing scripts-webpack-pluginX [wdm]: Error: ENOENT: no such file or directory, open '/Volumes/HSSD/projects/JS/Angular/ng5/node_modules/jquery/dist/jquery.js'
```

## Expected behavior

The server should start and the js library should be connected to the main page

## Minimal reproduction of the problem with instructions

Author

Why, then, is everyone advised to add `../` ?

Some confusion...

```
myApp [Volumes/HSSD/projects/JS/Angular/ng5/myApp] - .../angular.json [myApp]
angular.json
20  "tsConfig": "src/tsconfig.app.json",
21  "assets": [
22    "src/favicon.ico",
23    "src/assets"
24  ],
25  "styles": [
26    "src/styles.css"
27  ],
28  "scripts": ["node_modules/jquery/dist/jquery.js"]
29
30  "configurations": {
31    "production": {
32
```

Run: start x

chunk {vendor} vendor.js, vendor.js.map (vendor) 3.06 MB [initial] [rendered]  
[wdm]: Compiled successfully.

P.S. Start using the terminal gives the same result
