

# Module not found: Error: Can't resolve 'rxjs/add/operator/catch' in 'F:\Angular\HttpServices\http-services\src\app'

Here is my code.

```
8 import { injectable } from '@angular/core';
import { Http } from '@angular/http';
import 'rxjs/add/operator/catch';

★ @Injectable({
  providedIn: 'root'
})
4 export class PostsService {
  private url = 'https://jsonplaceholder.typicode.com/posts';
  constructor(private http : Http ) { }
  getPosts {
    return this.http.get(this.url);
  }

  deletePost(id) {
    return this.http.get(this.url + '/' + id);
  }
}
```

I am doing this code on my PC it's working but not working on a laptop. It seems funny but this is true.  
This is the structure of my project

Angular CLI : 1.7.4 and Angular CLI : 6.0.1 What is the difference between this two ? – [Ayjaz Sayed](#) May 12 '18 at 18:21

New version of rxjs no longer supports single imports, instead try:

13

```
import { catchError } from 'rxjs/operators';
```

In Angular 6 RXJS imports have been changed, operators must be "wrapped" in pipe() and written without a dot at the beginning (was: .map, .retry, .catch; now: map, retry and catchError instead of a catch):

8

```
import { catchError, map } from 'rxjs/operators';
```

and use pipe()

```
getPosts() {  
  // pack in "pipe()"   
  return this.http.get(this.url).pipe(  
    // eg. "map" without a dot before  
    map(data => {  
      return data;  
    }),  
    // "catchError" instead "catch"  
  );  
}
```

"I am doing this code on my PC it's working but not working on a laptop" - on the laptop you've a newer version of angular cli. It generates angular 6 with new, other imports. Regards

While this code may answer the question, providing additional context regarding how and/or why it solves the problem would improve the answer's long-term value. – [Nic3500](#) Sep 19 '18 at 15:23

in angular 7, here is how to handle in a clean way the http get request

2

```
import {Injectable} from '@angular/core';
import {HttpClient} from '@angular/common/http';
import {Observable, throwError} from 'rxjs';
import {catchError, retry} from 'rxjs/operators';
```

```
@Injectable({
  providedIn: 'root'
})
export class EmployeeService {

  constructor(private _http: HttpClient) {
  }

  public getPosts(): Observable<Post[]> {

    return this._http.get(<URL>).pipe(
      retry(1), catchError(error => {
        return throwError(error.message);
      }));
  }
}
```

try this and will work!...

1

```
import { Injectable } from '@angular/core';
import { HttpClient, HttpResponse } from '@angular/common/http';
import { catchError } from 'rxjs/operators';
import { Observable, throwError } from 'rxjs';

.get(<URL>).pipe
(
  catchError((error: HttpResponse) =>{
    return throwError(error.message || 'server error');
  })
)
```

Why don't you try adding "import 'rxjs/add/operators/catch';" (put the 's' and make it operators) instead of "import 'rxjs/add/operator/catch';"
