

# Angular Error: 'Component 'X' is not included in a module...' when declared in a sub module

I'm trying to consolidate my dialogs into an Angular module, but I'm getting a linting error in the IDE:

14

Component 'X' is not included in a module and will not be available inside a template. Consider adding it to an NgModule declaration.

Despite this error the application still loads and runs successfully.

## Example Component Definition

2

```
import { Component, Inject, OnInit, ViewEncapsulation } from '@angular/core';
import { MAT_DIALOG_DATA, MatDialogRef } from '@angular/material';

export interface AlertDialogData {
  titleText: string;
  dismissalText: string;
  contentComponent: string;
}

@Component({
  selector: 'app-alert-dialog',
  templateUrl: './alert-dialog.component.html',
  styleUrls: ['./alert-dialog.component.scss'],
  encapsulation: ViewEncapsulation.None
})
export class AlertDialogComponent implements OnInit {

  constructor(private dialogRef: MatDialogRef<AlertDialogComponent>,
    @Inject(MAT_DIALOG_DATA) public data: any) { }

  ngOnInit() {
  }

  handleCloseClick(): void {
```

## Sub module making Declaration/Export

```
import { CUSTOM_ELEMENTS_SCHEMA, NgModule } from '@angular/core';
import { CommonModule } from '@angular/common';
import { ZipLocatorDialogComponent } from './zip-locator-dialog/zip-locator-dialog.component';
import { AlertDialogComponent } from './alert-dialog/alert-dialog.component';
import { HelperDialogComponent } from './helper-dialog/helper-dialog.component';
import {
  MatAutocompleteModule, MatButtonModule, MatDialogModule, MatFormFieldModule,
  MatInputModule,
  MatSelectModule
} from '@angular/material';
import { FlexLayoutModule } from '@angular/flex-layout';
import { FormsModule, ReactiveFormsModule } from '@angular/forms';

@NgModule({
  imports: [
    CommonModule,
    FlexLayoutModule,
    FormsModule,
    ReactiveFormsModule,
    MatDialogModule,
    MatInputModule,
    MatFormFieldModule,
    MatSelectModule,
    MatAutocompleteModule,
    MatButtonModule
  ],
  exports: [
    ZipLocatorDialogComponent,
    HelperDialogComponent,
    AlertDialogComponent
  ],
  declarations: [
    ZipLocatorDialogComponent,
    HelperDialogComponent,
    AlertDialogComponent
  ],
  entryComponents: [
    ZipLocatorDialogComponent,
    HelperDialogComponent
  ]
})
```

It's not literally 'X', but it appears for every dialog component declared in the `AppDialogsModule`, i.e. `HelperDialogComponent`. The exports are only included, because I saw that was provided in a different SO answer however it makes no difference. The `AppDialogsModule` is already included as an import to the `AppModule` which is all that should be required correct? – [rawkfist0215](#) Nov 30 '17 at 23:46

- 1 There are quite a few rules here on how this works. Consider checking out my video on the topic from ngConf here: [youtube.com/watch?v=ntJ-P-Cvo7o&t=1s](https://www.youtube.com/watch?v=ntJ-P-Cvo7o&t=1s) – [DeborahK](#) Dec 1 '17 at 7:09

Regarding your error, have you seen this: [github.com/angular/vscode-ng-language-service/issues/10](https://github.com/angular/vscode-ng-language-service/issues/10). It appears that this may be a known error with the VS Code language service. Are you using that tool? – [DeborahK](#) Dec 1 '17 at 7:12

I'm using the npm package `@angular/language-service`: "`^4.3.6`" tool that ships with the CLI. Maybe it's the same issue the VS Code version has though. Thanks for sharing the link to the talk. While I think my modules were already configured correctly, (I removed exporting the components) you gave an excellent presentation! If anything I gained more understanding into the "why" instead of employing blind copy/paste tactics. – [rawkfist0215](#) Dec 1 '17 at 18:11

I had this same issue and this is how it got resolved :

- 1) Goto IntelliJ / IDE settings and tick(set) the Recompile on changes to :

Google

2) Goto *tsconfig.json* and set the *compileOnSave* to true :

Facebook 

```
1 {  
2   "compileOnSave": true,  
3   "compilerOptions": {  
4     "outDir": "./dist/out",  
5     "sourceMap": true,  
6     "declaration": false,  
7     "moduleResolution": "node"  
```

Now go and remove the @Component that's causing the issue, and retype @Component.

This worked for me :) Good Luck.

1 god I am happy I found this answer! The webstorm site doesn't even have this there. – [Mark](#) Mar 3 at 21:16

---

▲ Add @angular/language-service as a dev-dependency

1

or

▼ do npm install @angular/language-service

Can confirm this is fixed in v 5.2.9 . YMMV with earlier versions.

1 Or in Visual Studio Code just uninstall the Angular Language Service extension. – [SushiGuy](#) Mar 6 at 22:36

First: declare all your components in **declarations** section ( `app.module.ts` ).

1 If the problem persists, I remember that is a problem with the beta angular-cli versions.

The issue you are running into is a variant of the baseUrl issue. The language service does not correctly respect the baseUrl option. For example, if you change the import of the shared module from `app/shared/shared.module` to `../shared/shared.module` then the errors go away.

Doing so leads to the following error: Uncaught Error: Type ZipLocatorDialogComponent is part of the declarations of 2 modules: AppDialogsModule and AppModule! Please consider moving ZipLocatorDialogComponent to a higher module that imports AppDialogsModule and AppModule. You can also create a new NgModule that exports and includes ZipLocatorDialogComponent then import that NgModule in AppDialogsModule and AppModule. Which feels ironic, because their suggestion sums up what I'm trying to do in the first place. – [rawkfist0215](#) Dec 1 '17 at 0:00

Try to remove from **imports** and only put this module in **declarations** – [alvaropanizo](#) Dec 1 '17 at 0:02

2 Sorry, but the error message still displays. It's only the linting tool that's confused, because Angular still compiles the app and runs without exceptions. – [rawkfist0215](#) Dec 1 '17 at 0:24
