

Disable the default keyvalue pipe sort in angular

Asked 9 months ago Active 6 months ago Viewed 723 times

3

```
<tr *ngFor="let a of arrayOfObjects">
  <td *ngFor="let item of cfValues | keyvalue">
    {{item.value}}
  </td>
</tr>
```

★
1 I am just trying to print the items in the regular order but the key/value pipe does a default sorting based on the index. Is there a way to disable the default sorting?

 angular  angular-pipe

Default sorting? IMK, it depends on the browsers on how they pull out the keys, JS objects are unordered. – xyz Jan 8 at 11:41

1 Answer

▲ You need to return 0 if you want them to not be ordered. So in your cause you could either do `<td *ngFor="let item of cfValues | keyvalue : 0">`

14

But that would throw a ts error: `TypeError: The comparison function must be either a function or undefined`

Else, you can create a function that returns 0 and use

```
function returnZero() {
  return 0
}
```

```
[... in your template]
<td *ngFor="let item of cfValues | keyvalue : returnZero">
```
