

RXJS6 Upgrade: ErrorObservable has no exported member 'ErrorObservable'

I have upgraded my Angular 5 app to 6.0.1 and RxJs to 6.1.0.

8

In one of my services, I have the import below:

```
import { ErrorObservable } from 'rxjs/observable/ErrorObservable';
```

However, I now get the following error:

1

Module "...node_modules/rxjs/observable/ErrorObservable" has no exported member 'ErrorObservable'.

I have search online for how to import this in rxjs6 or if the name

ErrorObservable

has changed.

I used this as my guide for the upgrade process:

[RxJS 6 Changes - Overview](#)

Does anyone know how to resolve this import?

```
import { Observable, throwError } from 'rxjs';  
// import { ErrorObservable } from 'rxjs/observable/ErrorObservable';
```

Thank you everyone! The above is the answer with the old line commented out.

Usage:

```
return throwError('some message');
```
