Angular 6 setTimeout Module not found: Error: Can't resolve 'timers'

Asked 1 year, 3 months ago Active 2 months ago Viewed 20k times

I have a problem. I want to use `setTimeout` in angular to call a function after 2 second but I get this:

14 ERROR: Module not found: Error: Can't resolve 'timers'; this is my function:

```
login(user) {  
  console.log(user.value);  
  this.loginService.loginUser(user.value);  
  // this.user = this.LoginService.getUser();  
  setTimeout(() => {  
    this.user = this.loginService.getUser();  
  }, 2000);  
  if (this.user === undefined) {  
    console.log('username or password incorrect');  
  } else {  
    console.log(this.user);  
    this.navbar.connectComps(this.user);  
    this.navbar.getCheck();  
  }  
}
```

Please tell me what should I do to solve this issue.

javascript

angular

module

setTimeout

I got the same error when I used `setTimeout`. turns out angular added the following line without me realizing it. Once I removed it, everything started to work again.

```
// remove this import  
import { setTimeout } from 'timers';
```

3 You are right. After removing the `import { setTimeout }` problem was solved. Thank you very much . – Ciprian Jun 2 '18 at 9:04

As a side note, this line of import is using another node-js `setTimeout` . ref nodejs.org/api/... – FindOutIslamNow Jun 21 '18 at 11:07
