

Parameter 'm' implicitly has an 'any' type

Asked 1 year, 5 months ago Active 1 year, 5 months ago Viewed 812 times

I am getting an error while running my project. This is the code :

0

```
private populateModels() {  
    var selectedMake = this.makes.find(m => m.id == this.vehicle.makeId);  
    this.models = selectedMake ? selectedMake.models : [];  
}
```

Here is the error:

```
ERROR in [at-loader] ./ClientApp/app/components/vehicle-form/vehicle-  
form.component.ts:82:40  
    TS7006: Parameter 'm' implicitly has an 'any' type.
```

1 Answer

You can just add a type to your `m` variable this way:

2

```
private populateModels() {
```

By using our site, you acknowledge that you have read and understand our [Cookie Policy](#), [Privacy Policy](#), and our [Terms of Service](#).

```
this.models = selectedMake ? selectedMake.models : [];  
}
```

So you have to add `m: any` or `m: vehicle` depending on the type you are using for your model. and this error will disappear.
