

ngIf multiple conditions not working with router.url

I am trying to hide a div based on routes. If the router url is login or forgot password than hide the div. Here is the code and its not working.

0

```
<div class="isNotLogin" *ngIf="router.url != '/login' || router.url != '/forgot-  
password'">  
  hide this content  
</div>
```

But its working for single condition:

```
<div class="isNotLogin" *ngIf="router.url != '/login'">  
  hide this content  
</div>
```

Any Idea?

typescript

2 This logic does not makes sense - you cannot be the same time on login and forgot-password thus it is true always. Either change to && or change conditions to === – Antoniossss Aug 21 '18 at 18:05

@Antoniossss - I was about to post an answer for && . Will you post one? – ConnorsFan Aug 21 '18 at 18:07

I have another div which displays on login or forgot password router url. This div is a canvas behind which is hard coded, I can't remove it or move it at the moment. – CreativeDip Aug 21 '18 at 18:07

If you want to hide Div only if login or password. you need to use ===.

2

```
<div class="isNotLogin" *ngIf="!(router.url === '/login' || router.url === '/forgot-  
password')">  
  hide this content  
</div>
```

Added Not operator. please check now. – [Suresh Kumar Ariya](#) Aug 21 '18 at 18:08

Its working. Thanks :) I will select your answer. – [CreativeDip](#) Aug 21 '18 at 18:10

1 @SureshKumarAriya you should update your answer, the issue is not the operator, but the wrong condition. – [dAxx_](#) Aug 21 '18 at 18:13

Adding on to @Suresh's answer, according to [Angular Style Guide](#), you should put presentation logic in the Component Class instead of the template itself. This improves testability, maintainability, and reusability.

1

Move the logic to show/hide the div in a function in the Component Class and then call it from `*ngIf` in your template.

```
@Component({ ... })  
export class YourComponent {  
  
  ...  
  
  shouldShow() {  
    return !(router.url === '/login' || router.url === '/forgot-password');  
  }  
  
  ...  
}
```

Google

```
<div
  class="isNotLogin"
  *ngIf="shouldShow()">
  hide this content
</div>
```
