

Step 2: Configure animations

Once the animations package is installed, import `BrowserAnimationsModule` into your application to enable animations support.

```
import {BrowserAnimationsModule} from '@angular/platform-  
browser/animations';  
  
@NgModule({  
  ...  
  imports: [BrowserAnimationsModule],  
  ...  
})  
export class PizzaPartyAppModule { }
```

Alternatively, you can disable animations by importing `NoopAnimationsModule`.

```
import {NoopAnimationsModule} from '@angular/platform-browser/animations';  
  
@NgModule({  
  ...  
  imports: [NoopAnimationsModule],  
  ...  
})  
export class PizzaPartyAppModule { }
```

Step 3: Import the component modules

Import the `NsModule` for each component you want to use:

Contents

Step 1: Install
Angular Material,
Angular CDK and
Angular Animations

NPM

Yarn

Alternative 1:
Snapshot Build

NPM

Yarn

[Alternative 2:
Angular Devkit 6+](#)

Step 2: Configure
animations

Step 3: Import the
component
modules

Step 4: Include a
theme

Step 5: Gesture
Support

NPM

Yarn

Step 6 (Optional):
Add Material Icons

Appendix:
Configuring

SystemJS

Example Angular
Material projects
