

Angular 4 display in next line for newline character for p tag

1

I have a page in angular 4 where I have to display user comment list. Users may enter comments in multi-line. I would like to bind text in multi-line. I would like to display text starting by `\n` in the new line.

I have tried

```
<p [innerHTML]="comment.text"></p>
&
<p>{{comment.text}}</p>
```

I don't want to replace `\n` with `
` tag. I want something else.

If it can be done on the binding side that would be great.

javascript

angular

typescript

Why not use textarea? It will break line automatically as per `\n` – Ashok Shah Feb 1 '18 at 8:19

User input comments via textarea. Those comment lists are done using p tag – M14 Feb 1 '18 at 8:20

1 Those who are putting downvotes doesn't understand the question – M14 Feb 1 '18 at 8:21

▲ Make use of `white-space: pre-line;` style. Add a style class e.g. `multi lines text` and add that on your `<n>` :

By using our site, you acknowledge that you have read and understand our Cookie Policy, Privacy Policy, and our Terms of Service.

```
.multi_lines_text {  
  white-space: pre-line;  
}
```

and in your template:

```
<p class="multi_lines_text" [innerHTML]="comment.text"></p>
```

You could try the pre html element. [Link Pre](#) Make sure the DOMSanitizer don't remove the line breaking, it will remove everything thats not secure.
