

# No provider for TemplateRef! (NgIf ->TemplateRef)

Asked 3 years, 6 months ago   Active 2 months ago   Viewed 80k times

I'm trying to show a checkmark if an answer is the accepted answer:

206

```
template: `

`

```

But I get this error:

18

EXCEPTION: No provider for TemplateRef! (NgIf ->TemplateRef)

What am I doing wrong?

angular

angular2-template

## 1 Answer

You missed the `*` in front of `NgIf` (like we all have, dozens of times):

490

```
<div *ngIf="answer.accepted">&#10004;</div>
```

Without the `*`, Angular sees that the `ngIf` directive is being applied to the `div` element, but since there is no `*` or `<template>` tag, it is unable to locate a template, hence the error.

Error: StaticInjectorError[TemplateRef]:  
StaticInjectorError[TemplateRef]:  
NullInjectorError: No provider for TemplateRef!

You may have `<template>...</template>` in one or more of your component templates. Change/update the tag to `<ng-template>...</ng-template>` .
