I tried to have a multiline tooltip with below example. you can see \n is displaying in the tooltip. I want to have a break as we do with html kind of tooltip https://stackblitz.com/edit/angular-1e3np3-hbxpo2?file=app%2Ftooltip-auto-hide-example.css

    angular   typescript   angular-material   material-design   angular6

It is working but you need to increase the width of the tooltip if you want a clearer effect - StackBlitz

```
::ng-deep .material-tooltip {
    white-space: pre-line;
    max-width: 500px !important;
```

Tooltip position

below ▼

ⓘ

```
* = wildcard at end (e.g. 34D* ) &#13; ! = not including (e.g. !34DX*)
- = not including (e.g. -34DX*)
Suggestions &#13; shown after 2 characters entered.
Suggestions &#13; match input anywhere in product number or description.
```
