I want to enable comments without space in tslint if comment starts with 4 slashes.

Rule: https://palantir.github.io/tslint/rules/comment-format/

I've tried

```
"comment-format": [true, "check-space", { "ignore-pattern": "//" }],
```

but it didn't helped.

tslint

From the documentation:

> Exceptions to `check-lowercase` or `check-uppercase` can be managed with object that may be passed as last argument.

It seems one cannot attach ignored patterns to `check-space`.

So, there 's no way to do it? –   Qwertiy   May 11 '18 at 14:39

@Qwertiy As far as I can tell, without ugly disable/enable comments for the rule, not really. I am having the same issue trying to mark logical sections of my code but the linter complains about comments that start with `//===` . An alternative that might work for you if you need it for that purpose as well: one line full with slashes, the second line `// Section name` and the third line for with slashes again. Unless, of course, you're having issue with something different. – Christian Ivicevic May 11 '18 at 14:48

No, I have the other problem. I'd like to use `////` for temporary commenting some blocks of code. –   Qwertiy   May 11 '18 at 15:07

add next rule to tslint.json:

```
"comment-format": [false, "check-space"]
```

Read the first sentence of the question. –   Qwertiy   Mar 14 at 16:16 ✏

Ironically, this was the answer I was looking for. – Our_Benefactors Aug 13 at 15:22
