I have some variable names starting with leading underscore , I still get this warning after updating my tslint.json

tslint.json

```
{
    "extends": "tslint:recommended",
    "rules": {
      "variable-name": [
        true,
        "ban-keywords",
        "check-format",
        "allow-leading-underscore"
      ]
    },
    "exclude": [
      "build/**/*",
      "node_modules/**/*",
      "tmp/**/*"
    ]
  }
```

where am I wrong ?

thanks for feedback

UPDATE

I am using version 4.5.1 of TSLint

typescript   tslint

1   Looks right to me at a glance, what version of TSLint are you using? – JKillian Mar 29 '17 at 17:32

I am using currently version 4.5.1. – user762579 Mar 29 '17 at 20:57

Can you verify that TSLint is indeed using that config file? See if other changes to it affect things? – JKillian Mar 30 '17 at 2:22

You right ... using tslint --project '.' --config ./tslint.json it works now ... I don't understand why tslint was not using it when not specified... (maybe weird behaviour w Webstorm IDE.. I'm using it..) – user762579 Mar 30 '17 at 6:58 ✎

You can solve the problem this way:

20

```
{
  "extends": [
    "tslint:recommended"
  ],
  "jsRules": {},
  "rules": {
    "variable-name": [
      true,
      "ban-keywords",
      "check-format",
      "allow-leading-underscore"
    ]
  },
  "rulesDirectory": []
}
```
