This question already has an answer here:

[Angular2 - Interpolate string with html](#) *1 answer*

[Angular HTML binding](#) *18 answers*

In my angular 4 app, I have a string like

```
comment: string;
comment = "<p><em><strong>abc</strong></em></p>";
```

When I serve this text in my html, like

```
{{comment}}
```

Then it displays:

```
<p><em><strong>abc</strong></em></p>
```

But I need to display the text "abc" in bold and italic form, like ***abc***

How can I do this?

[html] [ⓐ angular] [rendering]

This question has been asked before and already has an answer. If those answers do not fully address your question, please ask a new question.

1 Answer

Use one way flow syntax **property binding**:

114

```html
<div [innerHTML]="comment"></div>
```

3   Got it. It works. – Shams Nahid   Feb 27 '18 at 16:20

---

2   In Angular front-end, using [innerHTML] may lead to security faults, and thus should be disallowed. angular.io/guide/security. – Hong Nguyen Dec 28 '18 at 9:32

---

3   @HongNguyen As I understand it, I think that article you shared explains that it is safer to use [innerHTML]. Check the live example. – Manoj De Mel Jan 8 at 1:40

Thanks, but when my HTML be render, the string html generated, show as string, not Input or something like that. what should I do? – AmirReza-Farahlagha Mar 4 at 14:10

---

2   FYI from angular docs: "Angular recognizes the value (`[innerHtml]`) as unsafe and automatically sanitizes it, which removes the <script> tag but keeps safe content such as the <b> element." – coderatchet Jun 4 at 3:56
