Make complierOptions generate warnings instead of errors in tsconfig

Is there a way to indicate in the tsconfig.json file the options noUnusedLocals and noUnusedParameters as warnings instead of errors that block the compilation?

Currently I use them in the tsconfig.json file like this :

```
"compilerOptions": {
  "noUnusedLocals": true,
  "noUnusedParameters": true
},
```

I tried the option :

"no-unused-variable": true,

in the tslint.json file but it doesn't detect errors like the tsc, and in visual studio code I can't see them underlined.

typescript   visual-studio-code   tslint

As you may have seen, Visual Studio Code has a hack to display noUnusedLocals and noUnusedParameters problems as warnings during live editing (the `typescript.reportStyleChecksAsWarnings` setting, which defaults to true). The tslint extension does not display

to block the emit, then you could have Visual Studio Code use one `tsconfig.json` that has noUnusedLocals/noUnusedParameters

enabled and have your command line builds use `tsc` with a separate `tsconfig.json` that has the options disabled, plus `tslint` with no-unused-variable.
