Calling function SocialLoginModule, function calls are not supported.Consider replacing the function or lambda with a reference

after "ng serve" or "npm start" i'm getting below error,

5

```
$ ng serve
Your global Angular CLI version (1.2.1) is greater than your local
version (1.0.0-rc.2). The local Angular CLI version is used.

To disable this warning use "ng set --global warnings.versionMismatch=false".

ERROR in Error encountered resolving symbol values statically. Calling function 'SocialLoginModule', function calls are not supp
orted. Consider replacing the function or lambda with a reference to an exported function, resolving symbol AppModule in F:/Sach
in/Project/app-gov-ui/src/app/app.module.ts, resolving symbol AppModule in F:/Sachin/Project/app-gov-ui/src/app/app.module.ts
webpack: Failed to compile.
```

after saving any file from work space, it compiles all project files and this time it works well. I'm not getting why this happens. Could you please someone help me to get out of this. Please find below image for the same.

Please find below app.module.ts file

```
    import { BrowserModule } from '@angular/platform-browser';
import { NgModule } from '@angular/core';
import { FormsModule } from '@angular/forms';
import { HttpModule } from '@angular/http';
import { RouterModule } from '@angular/router';
import { SocialLoginModule, AuthServiceConfig, GoogleLoginProvider,
FacebookLoginProvider } from "angular4-social-login";
import { StarRatingModule } from 'angular-star-rating';
import { AppComponent } from './app.component';
import { LandingPageComponent } from './landing-page/landing-page.component';
import { AppHeaderComponent } from './app-header/app-header.component';
let config = new AuthServiceConfig([
  {
    id: GoogleLoginProvider.PROVIDER_ID,
    provider: new GoogleLoginProvider("")
  },
```

```
        return config;
      }
      @NgModule({
        declarations: [
          AppComponent,
          LandingPageComponent,
          AppHeaderComponent
        ],
        imports: [
          BrowserModule,
          FormsModule,
          HttpModule,
          StarRatingModule.forRoot(),
          RouterModule.forRoot([
            { path: 'landing', component: LandingPageComponent },
            { path: '', redirectTo: 'landing', pathMatch: 'full' }
          ]),
          SocialLoginModule.initialize(config)
        ],
        providers: [{
          provide: AuthServiceConfig,
          useFactory: provideConfig
        }],
        bootstrap: [AppComponent]
      })
      export class AppModule { }
```

angular

✔ update the `imports` in that file to be:

```
SocialLoginModule
```

update providers in that file to be:

```
providers: [
  {
    provide: AuthServiceConfig,
    useFactory: provideConfig
  }
],
```

The full snippet can be seen at: https://github.com/abacritt/angular4-social-login/blob/master/README-AOT.md
