After updating to Angular 7.3.6, I get the following error on ng serve:

```
Microsoft Windows [version 10.0.17134.648]

Did you clean your node_modules, node cache and try `npm install` from fresh before running `ng serve` ? – nircraft Mar 28 at 13:36

yes I did, but the same error keeps on appearing and I don't know what else to do. Do you have any other suggestions? – pyth Mar 28 at 13:46

1   You should install `core-js@2.5.x` — nircraft Mar 28 at 13:48

yes it worked! thank you — pyth Mar 28 at 13:57

Adding it as answer, please accept. – nircraft Mar 28 at 14:01

4 Answers

You should install `core-js@2.5.x` that contains this file/module. See preset-env docs.

> 1   I decreased the version in package.json to "core-js": "^2.5.4", and run yarn, that worked for me. – Sami-L Apr 23 at 13:18

> 1   Worked !! Thank you – SudarP Apr 26 at 0:15

The version 3.0 of core-js has some breaking changes:

https://github.com/zloirock/core-js/blob/master/docs/2019-03-19-core-js-3-babel-and-a-look-into-the-future.md

You should find a line similar to this in one of your files: `import "core-js/es7/reflect";`

Change it to this: `import "core-js/proposals/reflect-metadata";`

If you'd like to use version 3.0, you can add the a path to your `tsconfig.json` file.

```
{
    "compilerOptions": {
        ...
        "paths": {
            "core-js/es7/reflect": [
                "node_modules/core-js/proposals/reflect-metadata"
            ]
        }
    }
}
```

not worked for me. – Gaurav Paliwal Apr 11 at 11:56

Any error messages? – Medeni Baykal Apr 13 at 0:06 ✏️

That does not work for me – Sami-L Apr 23 at 13:12

1   for me works this : "paths": { "core-js/es7/reflect": ["../node_modules/core-js/proposals/reflect-metadata"], "core-js/es6/*": ["../node_modules/core-js/es/*"]
     }, – mrapi May 29 at 6:35

I found possible answer. You have core-js version 3.0, and this version doesn't have separate folders for ES6 and ES7; that's why the application cannot find correct paths.

0

To resolve this error, you can downgrade the core-js version to 2.5.7. This version produces correct catalogs structure, with separate ES6 and ES7 folders.

To downgrade the version, simply run:

npm i -S core-js@2.5.7
